Table 1. Mean (SD) age, height, weight, and body mass index (BMI) of the 100 children in the study

Measure	Mean (SD)
Age (years)	10.1 (0.5)
Height (cm)	145.2 (10.1)
Weight (kg)	38.5 (10.2)
BMI (kg m <sup>-2</sup> )	18.6 (3.2)

children were asked to perform a series of tasks designed to assess their ability to perform a range of physical activities. The tasks were performed in a sequence, and the order of the tasks was randomized.

The first task was a 100 m sprint. The children were asked to run as fast as they could for 100 m. The time taken to complete the sprint was recorded. The second task was a 100 m shuttle run. The children were asked to run back and forth between two lines 100 m apart for 100 m. The time taken to complete the shuttle run was recorded.

The third task was a 100 m obstacle course. The children were asked to run through a series of obstacles for 100 m. The obstacles included a low hurdle, a cone, and a jump. The time taken to complete the obstacle course was recorded. The fourth task was a 100 m relay race. The children were asked to run 100 m as part of a relay race. The time taken to complete the relay race was recorded.

The fifth task was a 100 m endurance run. The children were asked to run 100 m at a steady pace. The time taken to complete the endurance run was recorded. The sixth task was a 100 m speed walk. The children were asked to walk 100 m as fast as they could. The time taken to complete the speed walk was recorded.

The seventh task was a 100 m sit and reach test. The children were asked to sit on the floor with their legs straight out in front of them. They were then asked to reach forward with their arms straight out in front of them. The distance from their feet to their hands was measured. The eighth task was a 100 m standing long jump. The children were asked to stand with their feet together and jump as far as they could. The distance from their feet to their hands was measured.

The ninth task was a 100 m shuttle run with a cone. The children were asked to run back and forth between two lines 100 m apart for 100 m. They were also asked to touch a cone in the middle of the shuttle run. The time taken to complete the shuttle run with a cone was recorded. The tenth task was a 100 m shuttle run with a hurdle. The children were asked to run back and forth between two lines 100 m apart for 100 m. They were also asked to jump over a hurdle in the middle of the shuttle run. The time taken to complete the shuttle run with a hurdle was recorded.

The children were then asked to perform a series of tasks designed to assess their ability to perform a range of physical activities. The tasks were performed in a sequence, and the order of the tasks was randomized.
